USER RESEARCH — GEN Z FOOD DELIVERY (N=24 INTERVIEWS)

Primary pain point

73%

frustrated by hidden delivery fees

Decision driver

68%

choose by cuisine mood, not brand

Session length

4.2m

avg time from open to checkout

Reorder rate

61%

repeat last 3 orders weekly

KEY INSIGHTS

- Gen Z scans visually — food photos drive click-through far more than star ratings
- Group ordering is common (65% order for 2+ people) but apps don't support it well
- Live tracking is table-stakes; any delay without updates causes anxiety and support tickets
- Dietary filters (vegan, halal, gluten-free) are heavily used but hard to find in current apps
- Payment friction kills conversion — Apple Pay / UPI preferred over card entry
- Dark mode usage: 78% of respondents keep system dark mode on permanently

HMW Statement

How might we help Gen Z users discover and order food that matches their mood in under 3 minutes, with full price transparency and zero friction at checkout?

DESIGN THINKING PROCESS

**1 — Empathise**

24 user interviews, 3 contextual observations, competitive audit of 4 apps. Discovered that Gen Z equates delivery apps with anxiety (fees, ETAs) rather than delight.

Interviews Observation Competitive audit

**2 — Define**

Synthesised insights into an affinity map. Three core problem themes: Price opacity, Dietary friction, and Social isolation of the ordering experience.

Affinity map HMW statements POV statements

**3 — Ideate**

Crazy 8s workshop produced 64 concepts. Dot-voted to 6 concepts. Key bets: mood-based discovery, inline price transparency, and share-to-order group flow.

Crazy 8s Dot voting Feature matrix

**4 — Prototype**

Lo-fi paper sketches → these digital wireframes → interactive Figma prototype (next). Prioritised 5 screens covering the happy path end-to-end.

Paper sketch Lo-fi wireframe Figma prototype

**5 — Test (planned)**

5-participant usability test targeting the 3-minute checkout goal. Key tasks: find a vegan meal, place group order, track delivery. SUS score + task completion rate as KPIs.

Usability test SUS score Task completion

**Design Decisions**

Mood-first home breaks the category-list paradigm. Price breakdown shown in cart before checkout. Group order CTA surfaced in cart, not buried in settings.

Mood UX Transparent pricing Group order
